

From our Haunted House Tutorial

Print out template (I like to use cardstock or stiff paper.)

Use the pin prick method to outline/punch through the dark lines for windows & doors, etc.

Cut out your paper template.

Roll out black fondant onto waxed paper that has been lightly greased with vegetable shortening. Press the template onto the fondant, raised side down, leaving a pattern. Cut around your template, trimming away the excess fondant.

Cut away the windows and doors using the pattern you've pressed into the fondant as your guide.

Brush piping gel onto the cut-out and lift the waxed paper (with fondant house) up and onto the cake. (This is the waxed paper transfer method.)

The process will seem much, much simpler if you watch our video!

Have fun!!!
